Statistical Data Visualization With Seaborn

The Python visualization library Seaborn is based on matplotlib and provides a high-level interface for drawing attractive statistical graphics.

Make use of the following aliases to import the libraries:

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
```

The basic steps to creating plots with Seaborn are:

1. Prepare some data
2. Control figure aesthetics
3. Plot with Seaborn
4. Further customize your plot

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
>>> tips = sns.load_dataset("tips")
>>> sns.set_style("whitegrid")
>>> g = sns.lmplot(x="tip", y="total_bill", data=tips, aspect=2)
>>> g = (g.set_axis_labels("Tip", "Total bill (USD)").
>>> set(xlim=(0,10), ylim=(0,100)))
>>> plt.title("title")
>>> plt.show(g)
```

Step 1: `sns.set_style("whitegrid")`
 Step 2: `sns.lmplot(x="tip", y="total_bill", data=tips, aspect=2)`
 Step 3: `g = (g.set_axis_labels("Tip", "Total bill (USD)").`
 Step 4: `set(xlim=(0,10), ylim=(0,100)))`
 Step 5: `plt.title("title")`
 Step 6: `plt.show(g)`

1 Data

Also see Lists, NumPy & Pandas

```
>>> import pandas as pd
>>> import numpy as np
>>> uniform_data = np.random.rand(10, 12)
>>> data = pd.DataFrame({'x': np.arange(1,101),
>>> 'y': np.random.normal(0, 4, 100)})
```

Seaborn also offers built-in data sets:

```
>>> titanic = sns.load_dataset("titanic")
>>> iris = sns.load_dataset("iris")
```

2 Figure Aesthetics

```
>>> f, ax = plt.subplots(figsize=(5, 6))
```

Seaborn styles

```
>>> sns.set()
>>> sns.set_style("whitegrid")
>>> sns.set_style("ticks",
>>> {"xtick.major.size": 8,
>>> "ytick.major.size": 8})
>>> sns.axes_style("whitegrid")
```
